Made for everyone.

## Setting Up MFA Permissions for Corporate Clients

This guide explains how to set up two different Multi-Factor Authentication (MFA) permissions for corporate clients on XBO.com. One MFA method will be used for login authentication via Google Authenticator, and another for authorizing withdrawals via SMS.

### Step-by-Step Instructions

#### 1. Navigate to your account's Security Settings.

#### 2. Set up Google Authenticator for login authentication:

Scan the QR code using your Google Authenticator app. Enter the code generated by the app to confirm.

#### 3. Set up SMS authentication for login and withdrawals:

Enter the code sent via SMS to confirm the number.

### Expected Behavior

After completing the setup: Users will log in using Google Authenticator. Withdrawals can only be approved by an authorized user who receives the OTP via SMS to the registered phone number.
